

If you have any of these health conditions you should get a COVID-19 vaccination

COVID-19 is the illness caused by the Coronavirus it can make people very ill or even die. This is why people have had to stay home in lockdowns and wear face coverings.

But there are vaccines which help keep you safe from the Coronavirus. The NHS are giving the free vaccine to everyone.

Some people who already have health conditions may be at high risk of being very ill if they get the Coronavirus.

So, they should get the vaccine as soon as possible.

Doctors and experts have made a list of health conditions. If you have any of these, you should get called in for a vaccine no matter how old you are.

If you have not, tell your GP

Some of the conditions on the list

- Lung conditions – such as severe asthma, COPD, bronchiectasis and cystic fibrosis

- Heart conditions – such as congenital heart disease, heart failure

- Kidney disease

- Liver conditions – such as cirrhosis and hepatitis

- Diabetes

- Brain or nerve conditions – such as dementia, Parkinson's disease, motor neurone disease, multiple sclerosis, epilepsy, cerebral palsy or stroke
